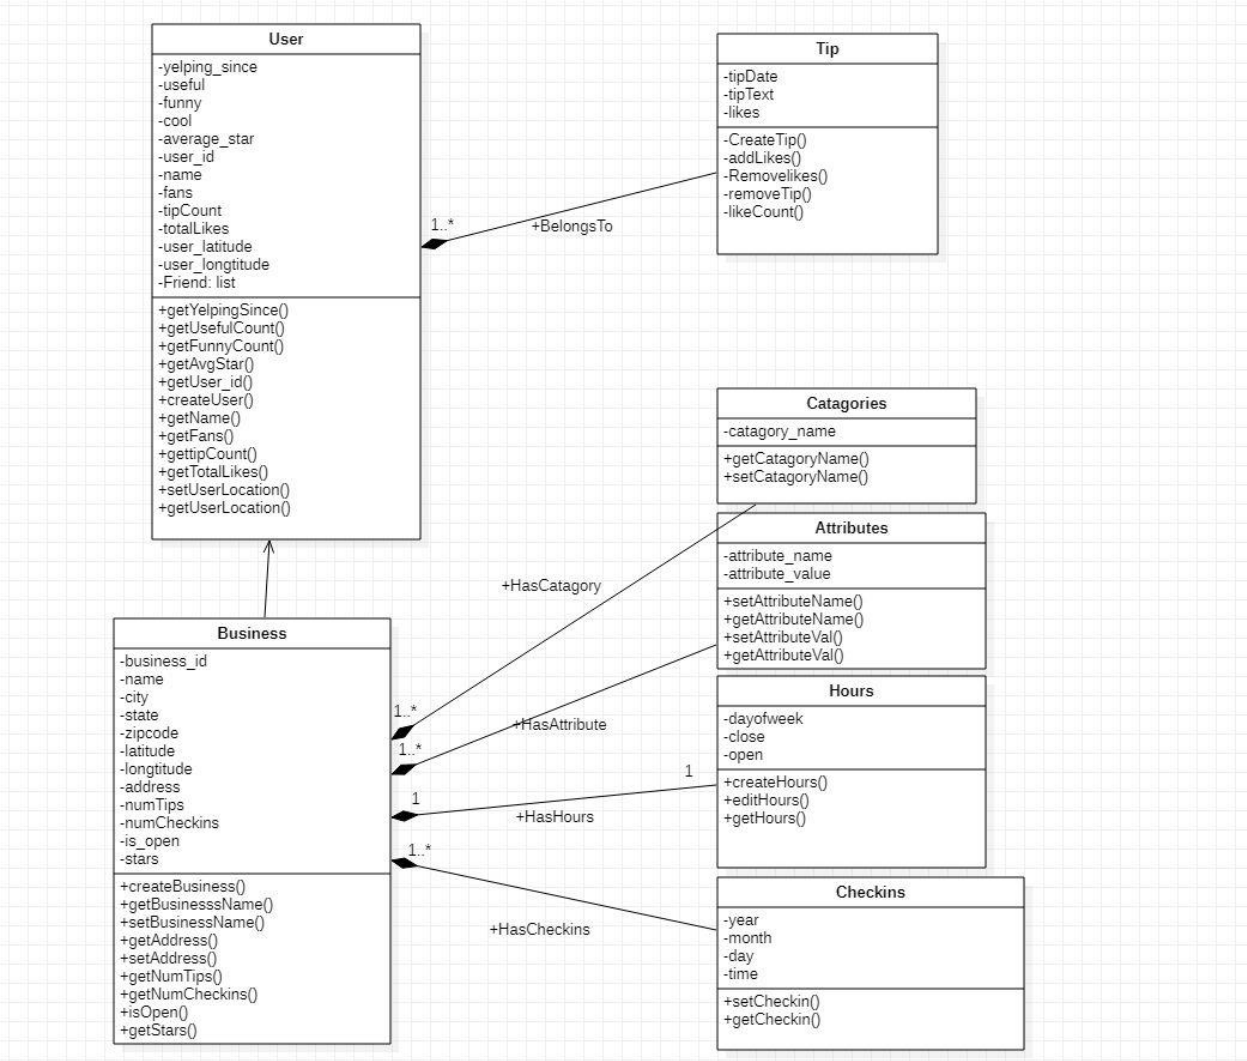
CptS322 milestone 4



Brief description of Class diagram

The **Business** class inherits from **User** since users can also own businesses. The use of composition instead of aggregation on **Tip** class is because a tip couldn't exist without the user behind creating the **Tip**, same with **(Categories/Attributes/Hours/Check-ins)** the must belong to a business to exists. For **(Categories/Attributes /Check-ins)** We use "1 to many" relationships, because 1 business can have multiple of those features. However, for **Hours** we use "1 to 1" relationship as a business has 1 set of hours.
